Travis,
I had your email address backwards, earlier – sorry about that. Sending this info FYI. Thanks!

Jill, we intend to meet next week to determine who the USFWS point of contact will be for this project. Then you can route your questions/requests through that person and they can coordinate with the appropriate USFWS people. This will ensure better records management and limit the number of people involved with it. We are currently operating under a litigation hold for documents associated with the Clean Water Act and NPDES permit. We will get you the requested information; however, it may be a week or more before you receive it. Please call if you have questions.

Hi Mary,

Thank you for your attempts to email me your flow and temperature data from the Icicle Creek intake and the groundwater wells. It sounds like the flow and temp data on the effluent (at Outfalls 1 and 2) might be what Greg can share. I really appreciate it. Understanding the data on flow and temperature (and other water quality parameters as well) will help me develop the NPDES permit for the Hatchery. When I talked with Malenna a few weeks ago, she had mentioned that you and Greg would be good people with whom to connect and request sharing of the data. Travis Collier at the Leavenworth Hatchery has also connected with me regarding the water quality parameters for which he has been monitoring the effluent and receiving water over a number of years. And just so you know, we ask Permittees for water quality data every time we start developing a permit. It would be hard to develop the permit details without analyzing the existing data available.

Since you are having trouble emailing the files to me, please feel free to burn them on to a CD and mail me the data. I'm including others from USFWS on this email, as perhaps it's possible to all work together and email me 1 CD with all the Leavenworth effluent and Icicle Creek data on it, since different people have access to different data currently. I'm not sure how that would work, but we might want to think about it? If that's not possible, and everyone would rather send their data to me separately, then you should all have my mailing address – I'll do my best to piece it all together and sort through it on my end.

Thanks so much for your help in collecting and compiling the data you have – and for sharing it. I know we're all in agreement that it would be good to develop the NPDES permit as soon as possible. Talk with you soon.
Jill

Jill,

I keep trying to send you data but mailer daemons kick-back the email due to maximum file size exceeded. Our max is 25MB. What is the max for your system?

Jill,

I am trying to send you data but I am getting kick-backs from mailer daemons. The file sizes are too large. I am going to have to piecemeal the data to you. Starting with this first go-round.

Mary

Delivery to the following recipient failed permanently:

nogi.jill@epa.gov

Technical details of permanent failure:

Google tried to deliver your message, but it was rejected by the server for the recipient domain smtpg.doi.gov by gsmtp5.doi.gov.
[137.227.28.15].

The error that the other server returned was:

552 5.3.4 Message size exceeds fixed maximum message size

Jill,

This is the first go-round of data that I am sending to you. Attached are .zxp files for discharge/flow for inputs from the groundwater wells and the outputs from the fish ladder (outfall 1) and the pollution abatement ponds (outfall 2). The groundwater well files were zipped together because the file sizes are too large. Open Excel first and then open these files from excel. Use text to columns to parse data. The wells and outfall 1 is in units GPM and outfall 2 is in units cfs.

Let me know if you want temp from outfall 1 or outfall 2 since the FRO had collected that data and it sounds like you will be getting it from them. I have the well temp data and will send to you.

Also, I need to do some checking on the Diversion Intake data and that may take some time.

Mary

Jill,

Can you remind me again which sites you would like data? I recall that you would like flow/discharge and temperature data for all inputs and outputs from the hatchery is that correct? Will daily averages be sufficient?

Please let me know if you would like data from sites other than those listed.

Inputs:

322533

322508

322517

322510

322511

322512

322513

322514

Outputs:

322501

322502

Thanks,

Mary
